

# COMPANY PROFILE

## Soliflo

As Southern Africa's foremost liquid control and tanker loading specialist, Soliflo is proud to be the preferred supplier of an extensive range of equipment and services throughout the Southern African Development Community region since 1984.

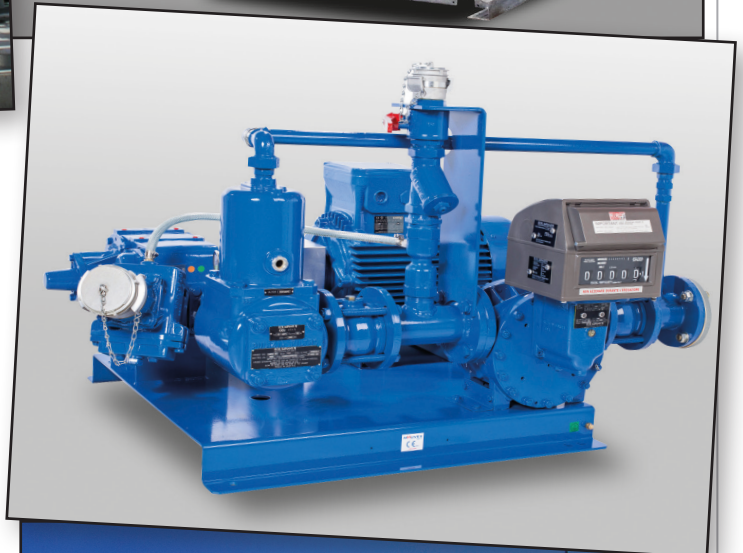

The company supplies the process and tank storage industries with a wide range of highly specialised, efficient and environment-friendly liquid control, fluid and gas transfer solutions. Loading and offloading equipment, products, systems and services for road, rail and marine tanker loading activities are a key part of Soliflo's business.

Recognising the inherent danger of personnel falling from tankers at bulk loading and off loading facilities, Soliflo has also developed a comprehensive range of tanker access, fall prevention and safety systems to prevent potential operator injuries and fatalities.

In partnership with local and international equipment manufacturers, suppliers and engineering companies, Soliflo's product portfolio includes tank truck equipment, tanker grounding and earthing devices, pumps, instrumentation and flow control equipment, vapour recovery and gas combustion systems, as well as integrated systems.

The company's comprehensive range of related equipment includes industrial hoses and assemblies, dry break couplings and adaptors, as well as breakaway and emergency release couplings.

Soliflo has its headquarters in Laser Park, west of Johannesburg and is ISO 9001:2008 and ISO/TS 29001:2010 Quality Management-certified and B-BBEE Level 2-accredited. The company has the products and skill sets to meet and exceed the specific requirements of the industries and companies that we serve.
